Figure S1  The mean number of spotted and nonspotted kernels per scored ear. Standard error of the mean is indicated for all values. Two pairs of elements that originated from the same progenitor Ac element but have large differences in transposition frequencies are mon00106::Ac and mon00068::Ac (from Ac33 on 5S) and mon00192::Ac and btli00252::Ac (from Ac12 on 1S). These differences may result from differences in the chromatin features flanking them.
