Figure S14  Comparison of synteny maps at single allele gene positions between CTG yeasts (seven studied cases). Alleles of genes (P. sorbitophila) and orthologs are represented by same color and line-connected. Hatched box corresponds to a pseudogene. One case of inversion is indicated by a green connector between alleles.
Figure S14  Comparison of synten maps at single allele gene positions between CTG yeasts (seven studied cases), cases four to seven.
