Figure S10. Expression of protein from tub>eGFPM::2x(miR-7) (green) where two perfect binding sites for miR-7 are positioned in the 3'UTR. Mosaic larval eye discs contain clones of mutant cells homozygous for Ago1 missense allele $T908M$ (A) and nonsense allele $Q127X$ (B). Mutant cells are marked by the absence of RFP protein (purple); cells with one or two copies of the wildtype Ago1 allele express RFP.
