Figure S4  Proliferation of WT and Eed-deficient cells. Immunofluorescence was performed on coverslips of designated genotypes and timepoints. Statistical significance was determined by chi-squared. The (n) for each experiment: WT, day 0 (n = 112); WT, day 2 (n = 141); Eed
deficient, day 0 (n = 110); Eed
deficient, day 2 (n = 79).
