

A

B

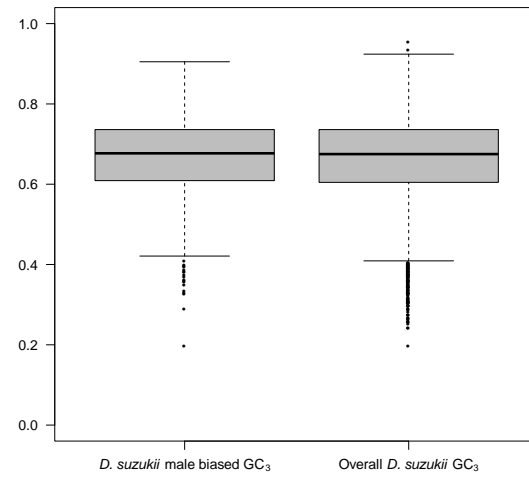

Figure S4 (A) GC₃ content for *D. suzukii* X and autosomal positions. The two data sets were significantly different (Mann-Whitney U test, $p < 2.2e^{-16}$). (B) GC₃ content for *Drosophila suzukii* male biased genes (left) and the overall *D. suzukii* GC₃ content. The two data sets were not significantly different (Mann-Whitney U test, $p = 0.706$).
