Figure S7. Color idiograms illustrating the metaphase chromosome complements of *S. oleracea* L. Mazeran and *S. tetrandra* Stev. PI 647859. The idiograms were constructed based on relative chromosome length, position of centromeres, and position and FISH signal intensity of 45S and 5S rDNA repeats. Autosomes of *S. tetrandra* Stev. PI 647859 were ordered according to their similarity in the possession of rDNA loci (45S and 5S) to those of *S. oleracea* L. Mazeran.
