Figure S2 Specific induction of CGL2 and CCTX2 in vegetative mycelium of *C. cinerea Okayama7* upon challenge with *A. avenae*. Whole cell extracts (10 µg each) isolated from *C. cinerea* O7 vegetative mycelium challenged with either *A. avenae* (Aa) or *C. elegans* N2 (Ce), were separated by SDS-PAGE and analysed by immunoblotting using specific antisera against CGL2 and CCTX2 (A) or stained with Coomassie Brilliant Blue (B).
