Serial dilutions of Pol II genetic interactors deletions combined with rpo21 (rpb1) alleles to examine genetic interactions on general growth and on transcription-related gene-specific phenotypes (Spt\textsuperscript{-}, MPA\textsuperscript{S}, Gal\textsuperscript{R} phenotypes). LOF Pol II alleles are marked by blue bar, GOF by green. Heatmap presentation of phenotype (general growth, temperature sensitivity, MPA, Gal, Spt phenotypes) quantification of this assay is shown in Figure 4.
