

About G3

G3: *Genes | Genomes | Genetics* (ISSN 2160-1836) is an open-access, peer-reviewed and peer-edited journal published monthly by the Genetics Society of America (GSA). The journal seeks to serve the genetics community by providing an outlet for dissemination of findings and experimental resources in genetics and genomics—an outlet unrestricted by subjective editorial criteria of perceived significance or predicted breadth of interest. G3 is interested in publishing papers that describe useful, well-executed and lucidly-interpreted genetic studies of all kinds, from those involving microbes to humans, from individuals to populations, and from classic “wet lab” experimentation to the most recent innovations in bioinformatics.

Through a fair and rapid peer-review and publication process, G3 seeks to provide a unified home for reporting genome sequences, genetic and physical maps of organisms, mutant screens, QTL mapping, genome wide association studies, as well as many other important and useful datasets. The GSA through G3 recognizes its responsibility to enable documentation of reagents and resources, descriptions of high-quality foundational work in developing areas of genetics, and datasets for meta-analysis, to name a few.

Publication is open equally to members and nonmembers of the GSA. G3's articles are distributed under the terms of the Creative Commons Attribution Unported License (<http://creativecommons.org/licenses/by/3.0/>), which permits unrestricted use, distribution, and reproduction in any medium, provided the original work is properly cited. For more information, please refer to our Instructions for Authors or contact the Editorial Office.

About the Cover

Symbiotic nodules on roots of *Medicago truncatula* are the site of expression for a novel gene family, the LEED..PEEDs, found only in the *Medicago* lineage. The LEED..PEEDs expanded recently and their expression suggests a novel function in plant-bacterial symbiosis, possibly as an aftermath of the evolution of bacteroid terminal differentiation. Trujillo *et al.*, G3 4:2003-2012.

Editor-in-Chief

Brenda Andrews
 University of Toronto

Deputy Editor, Complex Traits

Dirk Jan de Koning
 Swedish University of Agricultural Sciences

Deputy Editor, Human Genetics

Stephen W. Scherer
 The Hospital for Sick Children & University of Toronto

Executive Editor

Tracey DePellegrin Connelly

Editorial Board
