

Figure S1 Comparison of growth rates of wild-type and *mlt2*. Log-fold change in cell density was measured over four days and each strain was normalized to Day 1 measurements. The growth rate of *mlt2* did not differ significantly from wild-type.

Table S1 Normalized average growth rates of wild-type and *mlt2* strains (\pm S. D.). The growth rate of the *mlt2* strain over 4 days did not differ significantly from wild-type.

Strain	Fold Change				
	Day 1	Day 2	Day 3	Day 4	
wild-type	1	4 \pm 1	13 \pm 4	18 \pm 6	
<i>mlt2</i>	1	3.9 \pm 0.7	15 \pm 3	24 \pm 4	
wild-type vs. <i>mlt2</i>	P(0.05)	--	0.31	0.33	0.09
