

Figure S1 *DAN1* transcript is only detected in strains over-expressing *MSS11* as determined by qPCR. Shown is the relative expression data of each individual repeat for Σ 1278b and S288c wild type strains (labeled Sigma and S288c respectively), Σ 1278b with a *MSS11* deletion (Sigma *mss11*) and strains over-expressing *MSS11* (Sigma *MSS11* and S288c *MSS11*). Except for the over-expression strains no signal could be detected corresponding to *DAN1* transcript.
