

## 8. Mating type

**Figure S15** Comparative organization of the mating type locus (MTL) in *P. sorbitophila*, *D. hansenii* and *P. stipitis*. Conserved MTL genes are coloured: alpha idiomorph, in red; a1, in blue; a2, in green. Orthologous genes line connected. In *P. stipitis*, *MATa1* is annotated as *YOX2* and *MATalpha1* is not annotated.
