

Biological Process

Cellular Component

Molecular Function

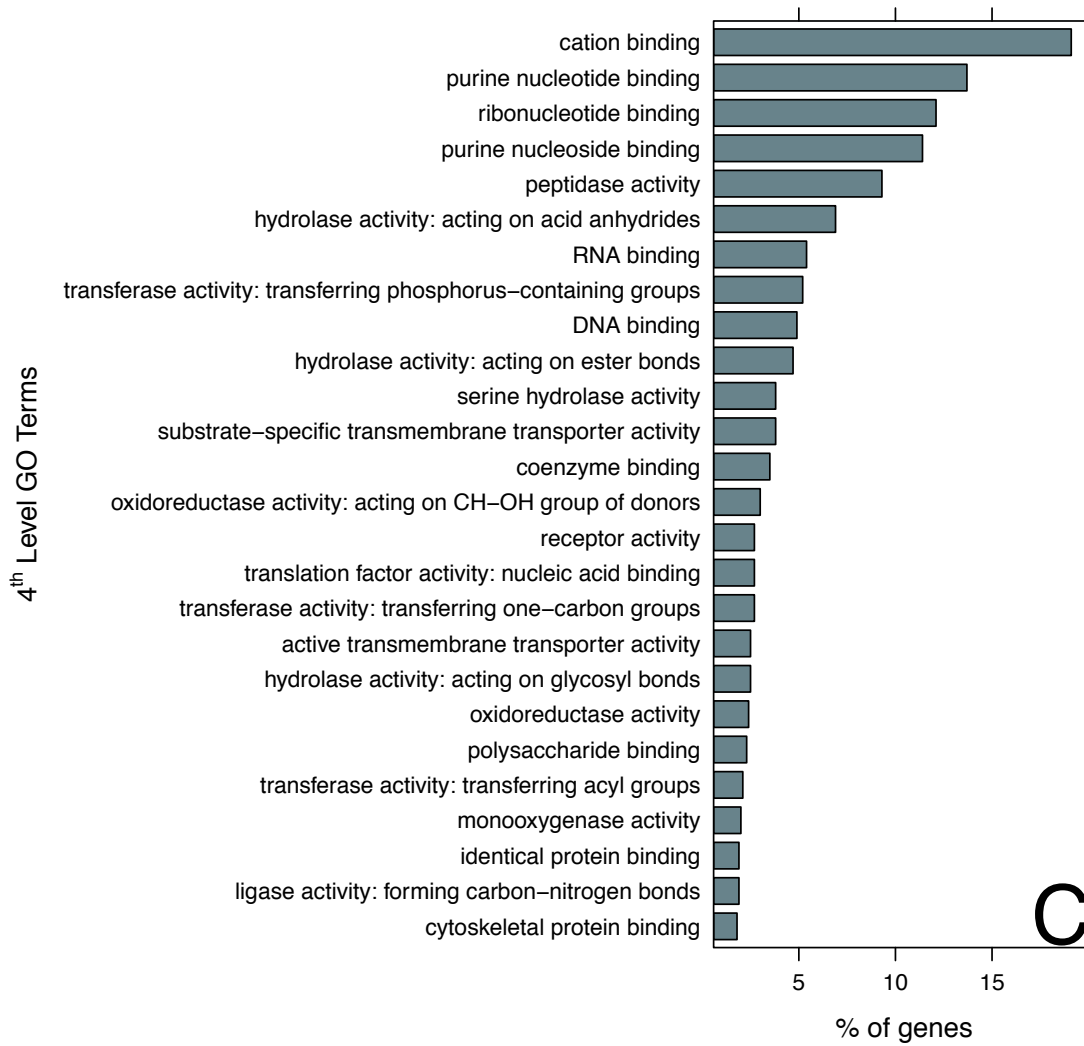

Figure S4 4th level GO term distributions for all annotated *Enallagma* genes. At the 4th level of the GO term hierarchy, we mapped the dataset of genes to 1463 GO terms across the 3 ontologies. Shown are the top 25 most significant results in each of the 1st level categories, A) biological processes, B) cellular components, and 3) molecular function.
