

Figure S2 Expression pattern of PUF-8::GFP in male germlines. Dissected germline of a male carrying the *kpls*[pMP15] transgene. This transgene expresses PUF-8::GFP fusion under the control of *puf-8* promoter and *puf-8* 3' UTR (Ariz et al. 2009). Strong expression of PUF-8::GFP (green) is seen in the distal germline, where PUF-8::GFP localization on perinuclear P granules is noticeable. DNA has been visualized by staining with Hoechst stain (red).
