

Figure S11 Between-tissue correlations for pairs of tissues for a potential sample mixture, of Mouse3484 and Mouse3503 in kidney. Correlations are calculated using tissue-pair-specific probes that show between-tissue correlation, across all mice, of > 0.75 . Tissue pairs are abbreviated by the first letter of the tissues' names. Red points involve Mouse3484 kidney, green points involve Mouse3503 kidney, and the purple point involves both.
