Figure S2  Adult germline defects in wild type and in *atx-2*(or821ts), *crn-3*(or959ts), *abtm-1*(or1400ts), and *rpl-7*(or990ts) mutants following temperature up-shifts to the restrictive temperature (26°C) at the L1 and L4 larval stages. Composite images were prepared as previously described (Figure 3) for the adult hermaphrodite gonad in wild type (A) and mutants (B-E).
